

Installing and Configuring the Browser Extension for Microsoft Edge on Windows (SSO)

Last Modified on 01.04.2025

Microsoft Edge, Mozilla Firefox and Google Chrome allow the silent installation of Browser Extensions. This way, the users do not have to manually install the Browser Extension themselves, but rather the IT Admins can roll out the Browser Extension in the background via a MDM solution, such as Microsoft Intune, Enteo NetInstall, or Matrix42 Empirum.

Each browser needs to be set up separately.

Browser Extensions in Edge can be installed and configured through Enterprise Policies. Refer to the official documentation at <https://docs.microsoft.com/en-us/deployedge/microsoft-edge-policies#extensions-policies> for more info.

Requirements

- Userlane Customer Success Manager needs to provide companyID and information on region
- IT Admin with access to Browser Installation and Policies
- Userlane Account Admin to set Integrity Token in Userlane Portal

Steps to Complete the Setup

1. Installation and Configuration
2. Verification

1. Installation and Configuration

ExtensionInstallForceList browser policy

Add the Userlane Extension (ID for Edge: joephgegnilhnnocnkigpmmamgghage) to the ExtensionInstallForceList: <https://docs.microsoft.com/en-us/deployedge/microsoft-edge-policies#extensioninstallforcelist> to install the Userlane Extension from the Edge Add-ons.

Example registry file

```
Windows Registry Editor Version 5.00
[HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Edge\ExtensionInstallForcelist]
"1"="joephgegnilhnnocnkigpmmamgghage"
```

Note: The Registry Key might need to be modified if multiple Browser Extensions (other than Userlane) are installed to Edge.

Browser Policy Configuration

Registry keys in the path.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Edge\3rdparty\extensions\joephgegnilhnnocnkigpmmamgghage\policy
```

All keys should have type REG_SZ.

Please note that you need to get the correct **companyId** and **region** from your Customer Success Manager!

Example registry file:

```
Windows Registry Editor Version 5.00
[HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Edge\3rdparty\extensions\joephgegnilhnnocnkigpmmamgghage\policy]
"companyId"="abc"
"companyIntegrity"="xyz"
"region"="eu"
```

Attention: "region" key is used to define where your Userlane Application is hosted:

- If the Userlane Application is hosted in the EU, the corresponding value for "region" is "eu".
- If the Userlane Application is hosted in the US, the corresponding value for "region" is "us".

2. Verification

Visit the Userlane Browser Extension Settings

- Do a right click on the Browser Extension
- Choose Options
- Navigate to Managed Storage
- Confirm that all values are present

Example of the information is not set up correctly:

Managed storage

Policies can be verified on dedicated page: <chrome://policy> (page cannot be linked, please paste url to the address bar)

The managed storage config is empty

If you see this, please go through the installation and configuration steps again.

⚠ The Userlane Browser Extension will trigger automatic SSO authentication. Please make sure that all users who receive the extension are able to authenticate via the SSO. This is to avoid users seeing an inactive tab with authentication error. This behaviour may occur e.g. on private browser profiles or for users who are not part of the SSO group.
