

Installing and Configuring the Userlane Browser Extension for Firefox on macOS (SSO)

Last Modified on 11.11.2024

Microsoft Edge, Mozilla Firefox and Google Chrome allow the silent installation of Browser Extensions. This way, the users do not have to manually install the Browser Extension themselves, but rather the IT Admins can roll out the Browser Extension in the background via a MDM solution, such as Microsoft InTune, Enteo NetInstall, or Matrix42 Empirum.

Each browser needs to be set up separately.

This article explains the configuration for Firefox on macOS.

Browser Extensions in Firefox can be installed and configured through Enterprise Policies.

Requirements

- Userlane Customer Success Manager needs to provide companyID and information on region
- Admin with access to Browser Installation and Policies
- Userlane Account Admin to set Integrity Token

Steps to Complete the Setup

- Installation and Configuration
- Verification

1. Installation and Configuration

ExtensionInstallForceList browser policy

Add the Userlane Extension (Link for Firefox: <https://browser-extension.userlane.com/firefox/userlane.xpi>) to the Extension\Install list: <https://github.com/mozilla/policy-templates#extensions>

There are 2 ways to achieve this.

Option A: With a plist file:

Example org.mozilla.firefox.plist file:

```
<?xml version="1.0" encoding="UTF-8"?>

<!DOCTYPE plist PUBLIC "-//Apple//DTD PLIST 1.0//EN" "http://www.apple.com/DTDs/PropertyList-1.0.dtd">

<plist version="1.0">

<dict>

  <key>EnterprisePoliciesEnabled</key>

  <true/>

  <key>Extensions</key>

  <dict>

    <key>Install</key>

    <array>

      <string>https://browser-extension.userlane.com/firefox/userlane.xpi</string>

    </array>

  </dict>

</dict>

</plist>
```

Option B: With a policies.json file

Place a policies.json file inside the Firefox.app container at
Firefox.app/Contents/Resources/distribution/policies.json.

Example policies.json file:

```
{

  "policies": {

    "Extensions": {

      "Install": [

        "https://browser-extension.userlane.com/firefox/userlane.xpi"

      ]

    }

  }

}
```

```
]
}
}
}
```

Browser Policy Configuration

(1) Firefox Extensions are configured through Managed Storage Manifests: https://developer.mozilla.org/en-US/docs/Mozilla/Add-ons/WebExtensions/Native_manifests#Managed_storage_manifests.

Example managed storage manifest .json file::

```
{
  "name": "{9f6832a6-ec0c-11e8-8eb2-f2801f1b9fd1}",
  "description": "Config for the Userlane Extension in Firefox",
  "type": "storage",
  "data": {
    "companyId": "abc",
    "companyIntegrity": "xyz"
    "region": "eu"
  }
}
```

Attention: "region" key is used to define where your Userlane Application is hosted:

- If the Userlane Application is hosted in the EU, the corresponding value for "region" is "eu".
- If the Userlane Application is hosted in the US, the corresponding value for "region" is "us".

Place this .json file anywhere on the client.

(2) For Firefox to find the file, we need to add its path to a Registry Key: https://developer.mozilla.org/en-US/docs/Mozilla/Add-ons/WebExtensions/Native_manifests#Manifest_location. The Name of the Userlane Extension for Firefox is {9f6832a6-ec0c-11e8-8eb2-f2801f1b9fd1}.

2. Verification

Visit

moz-extension://EXTENSION_INTERNAL_UUID/options/index.html?stay#/nativeconfig, where EXTENSION_INTERNAL_UUID can be found on <about:debugging#/runtime/this-firefox> page:

□

Nothing yet.

🧩 Extensions (2) ▾

 Userlane	<input type="button" value="Inspect"/>
Extension ID	{9f6832a6-ec0c-11e8-8eb2-f2801f1b9fd1}
Internal UUID	b6c3cff5-7f22-4a44-8f35-7296b53f2a14
Manifest URL	moz-extension://b6c3cff5-7f22-4a44-8f35-7296b53f2a14/manifest.json

for example: <moz-extension://b6c3cff5-7f22-4a44-8f35-7296b53f2a14/options/index.html?stay#/nativeconfig>

Please note that the Internal UUID is always unique.
