

Release Note - Showing URL fragments in HEART analytics

Last Modified on 01.06.2023

What is new

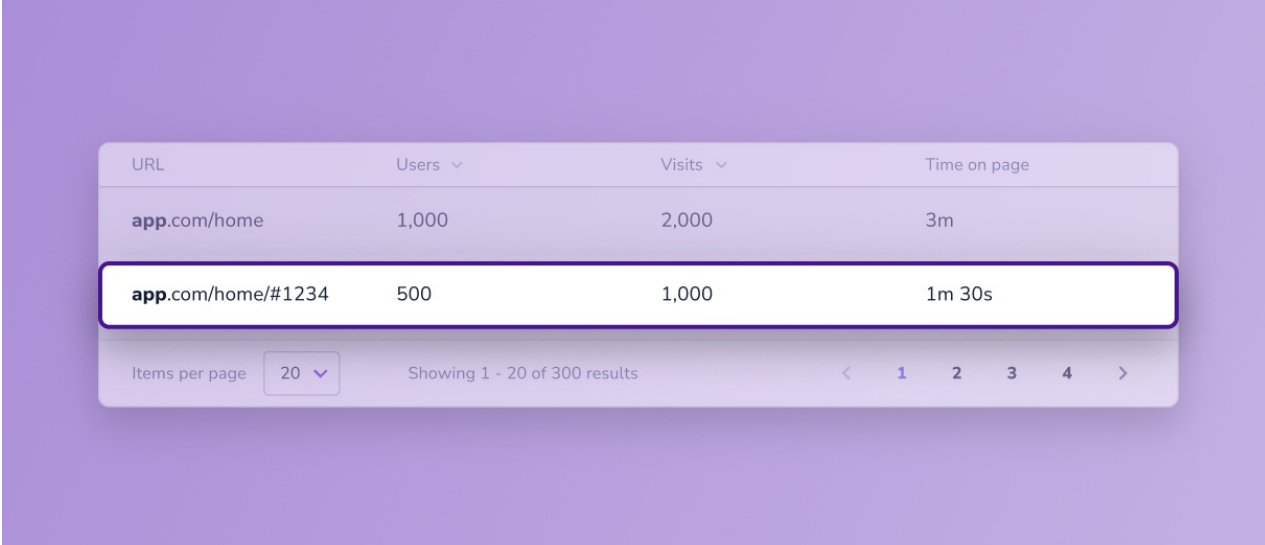

Your application's web addresses were shown in the HEART analytics without the part that comes after the # symbol (also called fragments). HEART analytics now include the fragments too, so you can track which parts of the application are visited. For example, the URL with test.com/#123 will now be fully shown.

How to find it

Adoption and Engagement pages in the HEART analytics.

/analytics/heart/adoption

/analytics/heart/engagement

The screenshot shows a table with four columns: URL, Users, Visits, and Time on page. The row for 'app.com/home/#1234' is highlighted with a red border. Below the table, there is a pagination control showing 'Items per page' set to 20, 'Showing 1 - 20 of 300 results', and navigation arrows.

URL	Users	Visits	Time on page
app.com/home	1,000	2,000	3m
app.com/home/#1234	500	1,000	1m 30s

Items per page: 20 | Showing 1 - 20 of 300 results | < 1 2 3 4 >

i Remember that this change is only for the fragments, we still don't display the URL parameters (the part that follows "?").
