Fixes and Improvements - May

Last Modified on 25.07.2025

Improvements

Portal

- We added a new privacy policy link to the Portal footer and login page, tailored for managers using the Portal and Editor.

- We added new discoverable apps in the App discovery, including several in the AI category.

- We improved the filtering logic in App Discovery and "AI app" is now displayed as a tag rather than a category

AI Assistant

- We updated the AI Assistant to respond to user questions with its general knowledge when no Userlane content can be found for the user question.

- We improved when and how Announcements are returned as responses to the user question.

- We updated and improved the search mechanism for the AI Assistant to make it faster, more accurate, and better able to respond to user questions.

- We added formatting to general knowledge responses in the Userlane AI Assistant.

- We improved how the AI Assistant remembers previous messages in an individual chat session.

- We updated and improved the prompts that the AI Assistant agent uses to find the correct answer to the user question.

Other

- We updated particular libraries to mitigate and avoid vulnerabilities.

- We updated and improved the options page in the browser extension with a new design.

Fixes

Portal

- Corrected the redirect URL on the Snippet setup page.

- Resolved an issue where Announcement descriptions couldn't include text with file extensions.

- Improved CSV upload reliability for the Portfolio Overview.

AI Assistant

- We fixed an issue where questions to the AI Assistant were not being correctly parsed.

- We fixed an issue where the content filtering mechanism in the search service was returning incorrectly formatted responses when triggered.

Other

- We fixed an issue where SSO authentication was being wrongly redirected
