

Top SaaS apps included in the App discovery

Last Modified on 18.07.2025

In order for App discovery feature to discover the applications used in your company, the Userlane browser extension observes the usage of leading SaaS application. However, it will only track visits to a predefined list of top SaaS applications.

The tracking operates by identifying the app's domain, so when the domain includes the specified pattern, it is presumed that the user is on that page. For instance, if "workday" is detected in the domain.

This list may expand in the future to include more SaaS applications, but it will specifically include only work-related tools and not websites that your employees might visit during their leisure time.

We will maintain transparency and regularly update this list for you to check.

List of applications included in the App discovery

- 15five
- 360Learning
- 99designs
- Abacus.AI
- Abnormal Security Corporation
- Absorb
- Accolade by Sopheon
