Improvements and Fixes - July

Last Modified on 18.08.2025

Improvements

Portal

- We updated segment table sorting, so that lists are now filtered by last updated by default.

- We removed the App discovery section from the Applications page to avoid metrics duplication.

- We updated the UI of the card design for main metrics in HEART.

- We deprecated the additional hint (arrow) from settings and customize options.

- We made minor enhancements to the new Application Overview page.

Assistant

- We removed the additional hint (arrow) functionality from Guide steps.

Fixes

Portal

- Fixed routing for Guides so the navigation re-click opens the correct chapter instead of unsorted Guides.

- Fixed comments-only filter for surveys and NPS.

- Fixed missing Survey scores in NPS and Standard survey details pages.

- Fixed Announcement link issue to allow URLs containing commas.

- Fixed incorrect toast message position in Edge browser.

Editor

- We fixed an issue where the Pause Recording mode was not reset when exiting and then re-entering the recording mode.

- We fixed an issue where attempting to publish a Validator before saving it would not actually publish the Validator.

- We fixed an issue where Vimeo videos with a hash query were not able to be properly added to Guide steps.

Assistant

- We fixed an issue where clicks on the underlying app would cause the Userlane Assistant to open.
