

Improvements and Fixes - September

Last Modified on 14.10.2025

Improvements

Portal

- Filters for segments and date ranges are now preserved as query parameters, maintaining the chosen state after refresh.
- The content analytics section on the App Overview page now links directly to the relevant content pages for easier navigation and consistency across analytics views:
 - Guides now link to the Guide Analytics page.
 - Hints open the Tooltip Analytics page, automatically filtered to show only Hints.
 - Beacons open the Tooltip Analytics page, filtered to show only Beacons.
 - Guides with Errors (if any exist) link to the Guide Analytics page, with the table pre-filtered to display only guides containing errors.
 - Announcement Analytics now link to the Announcements Analytics page.
- Improved currency display for financial numbers on Portfolio Overview, now shown in a more readable format.
- Updated content cards in the Portal App Overview to align with the standardized UI card component.
- Fixed several mislabeled elements on the Overview page for consistency.
- Improved various UI texts for clarity and consistency.
- Enhanced usability of analytics filters, making it easier to unselect options.
- Removed unnecessary back buttons from the “Heart to Happiness” empty-state modal.

Editor

- We improved how Validators work on certain applications where the `<input>` or `<textarea>` element is the child of a parent `<div>` element.

Fixes

Portal

- Added a missing toast success message after CSV upload on the Portfolio Overview page to confirm successful completion.
- Corrected the logic for the “With Errors” filter to properly display affected items.
- Fixed an issue where an empty overlay appeared even when an NPS survey was published. Survey analytics now display correctly even if only an NPS survey exists and no standard Surveys are published.
- Resolved an issue where segment filters on Portal Overview only applied after changing pages; now they apply immediately.

Editor

- We fixed an issue that caused recording elements in cross-origin iFrames to be slow and problematic.
- We fixed an issue where Tooltips with additional selector parameters (subSelector, parentNum) were not able to be saved.

Assistant

- We fixed an issue where Tooltips and Tags for some customers were not functioning as expected.
- We fixed an issue where Tooltips created in a cross-origin Iframe would not refresh as expected.

- We improved how Validators perform when created on form fields in an iFrame.
-
