

Improvements and Fixes - May 2026

Last Modified on 28.10.2026

Improvements

Portal

- We added healthcare applications to App Discovery.
- We made it possible to use any video source in the Welcome Slide and in Guides, with a warning when a source may not play for all users.

Editor

- We added SharePoint as a supported video source, so you can embed SharePoint videos in Guides and chapters.
- We improved auto-translation for Guides so that the Guide title is now translated along with the steps.

Fixes

Portal

- We fixed multiple issues with user attributes: some attributes were missing in the Portal or were not passed on after a user upload, segments did not match attributes with capital letters, and new attributes only appeared in the segment builder after a page refresh.
- We fixed an issue where Deployment Managers could not save the SSO configuration.
- We fixed an issue where the dates selected for an Announcement were displayed incorrectly in the preview and date picker.
- We fixed an issue where the File transfers page showed incorrect labels.
- We fixed an issue where the Customize Search menu could not be opened.
- We fixed issues in App Discovery, including data discrepancies and the detection of some digital adoption tools.

Editor

- We fixed an issue where a Guide could not be renamed in the Editor.
- We fixed an issue where Guides could not be moved in the Editor.
- We fixed an issue where English was set as the default language of a Guide after refreshing, even when it had not been selected.
- We fixed an issue where Guide PDF exports never finished.
- We fixed an issue where the step highlight could appear in Guide screenshots.
- We fixed several display issues in the Editor side panel, including footer buttons that did not span the full width and long Guide names that overflowed in the Tooltip settings.

Assistant

- We fixed an issue where the Assistant stopped showing for some end users.
- We fixed an issue where a Tooltip icon detached from its element when CSS anchoring was used.
- We fixed an issue where the highlight around a step's element jumped to the top left of the page when the element was hidden.

Other

- We fixed multiple backend stability issues that caused errors when saving content and user data.
